CARE WOOD

Wood has an open structure which is sensitive to humidity and temperature. To best take care of your furniture, we recommend keeping it in a relative humidity of 40–60% and a relative temperature of around 20 degrees.

Wipe down the wood with a cotton rag. Dust left on furniture too long can damage the surface. Dust particles build up and clump together, causing scratches in the finish when it is dusted.

To clean your furniture, wipe with a damp, warm cloth and a gentle soap.

How to use the dye touch-up pen

- Make sure that the place where you want to apply the colour is free of dust and grease.
- Gently dot some colour with the touch-up pen in the lengthwise direction of the fibres of the wood.

Note: Do not polish, otherwise you will get glow marks.
